

## Effective SUBFLOOR VENTILATION from Brisbane-Gold Coast to Sydney

Effective subfloor ventilation possesses a lot of benefits to the occupants as well as the building itself, especially to homeowners from Brisbane to the Gold Coast to Sydney.

Envirofan achieves this, by the use of 'stand alone' subfloor ventilation systems.

### **What is meant by the term 'stand alone'?**

In that Envirofan subfloor systems does not require apparatus' attached to them such as ducting, branch take off's or starting collars, which orthodox ventilation companies do. Envirofan systems replace brick or terra cotta vents in strategic locations of the dwelling.

You have heard the saying "The simplest solutions are often the best." Subfloor ventilation is not a complicated problem to fix, however utilising Envirofan subfloor ventilation systems just makes it so easy and this has always been our philosophy.

What can be said of the claim "The only certified company in Australia for ventilation". by others. This is an over exaggeration, as numerous rising damp companies have undergone a testing verification process at TAFE. After successfully completing the course, they are authorised to undertake ventilation work and are issued with a 'subfloor ventilation license' by the Department of Fair Trading. Concerning manufacturing companies involved in commercial ventilation systems and installations, does it not seem logical for these to have the necessary credentials to manufacture and install their own products?

We maintain our integrity of what our subfloor ventilation systems will do and what we claim. Envirofan shines as a beacon to those who are looking for the truth in subfloor ventilation systems.

Envirofan subfloor ventilation systems-Brisbane, Gold Coast, Central Coast, Sydney, Illawarra, Shoalhaven, Melbourne, Adelaide.

'If It Is Not Envirofan, Then It Isn't One'
